GIA NATURAL DIAMOND GRADING REPORT

October 10, 2026

GIA Report Number 2564554450

Shape and Cutting Style ..... Round Brilliant

Measurements ..... 6.44 - 6.47 x 4.01 mm

GRADING RESULTS

Carat Weight ..... 1.04 carat

Color Grade ..... D

Clarity Grade ..... Flawless

Cut Grade ..... Excellent

ADDITIONAL GRADING INFORMATION

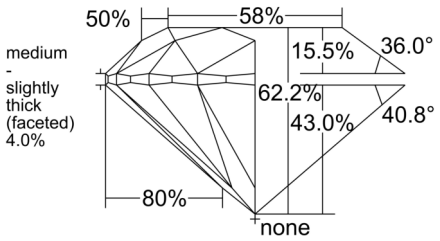

Polish ..... Excellent

Symmetry ..... Excellent

Fluorescence ..... None

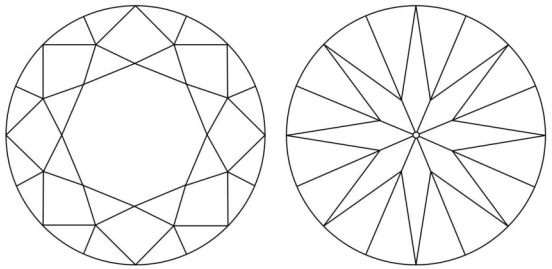

Inscription(s): GIA 2564554450

PROPORTIONS

Profile to actual proportions

DIAMOND TYPE CLASSIFICATION FOR GIA DIAMOND GRADING REPORT #2564554450

Scientists classify diamonds into two main "types" - type I and type II - based on the presence or absence of nitrogen which can replace carbon atoms in a diamond's atomic structure. These two diamond types can be distinguished on the basis of differences in their chemical and physical properties. Type I diamonds contain small amounts of nitrogen and they are subdivided into two groups (Ia and Ib) based on how the nitrogen occurs in the diamond's atomic structure. When the nitrogen atoms are aggregated in the structure, the diamond is classified as type Ia.

According to the records of the GIA Laboratory, the 1.04 carat Round Brilliant diamond described in GIA Diamond Grading Report #2564554450 has been determined to be a **type Ia** diamond. Type Ia diamonds are the most commonly encountered diamond type and occurs in a range of colors from near-colorless to yellow and brown. Because of their historic occurrence in South Africa, type Ia diamonds are often called "Cape" diamonds. Today, diamonds of this type have been found in all major diamond-producing regions of the world.

Among famous gem diamonds, the 127.00 carat Portuguese and the 101.29 carat Allnatt are examples of type Ia.
