The laboratory grown diamond described in this Report ("Report") has been graded, tested, analyzed, examined and/or inscribed by International Gemological Institute ("IGI") as a laboratory grown diamond. IGI's grading is based on the diamond's physical and optical properties as a mined diamond, with the exception of being grown by man (as manufactured product). IGI employs and utilizes those techniques and equipment, with the exception of the use of X-ray fluorescence, without limitation, 10X magnification, corrected triplet loupe, binocular microscope, master color comparison stones, non-contact optical measuring device, Diamond Sure™, Diamond View™, Spectrophotometer and such other instruments or processes as may be necessary to determine the diamond's characteristics and security features. A duly accredited gemologist or jeweler can advise you with relevance the importance of and interrelationship between cut, color, clarity and carat weight.
