The laboratory growth diamond described in this Report ("Report") has been graded, tested, analyzed, examined and/or inscribed by International Gemological Institute ("I.G.I."). A laboratory grown diamond is one that has essentially the same chemical, physical and optical properties as a mined diamond, with the exception of being grown by man. I.G.I. uses a variety of methods to grow diamonds, including high pressure/high temperature, currently available to I.G.I., including, without limitation, 10X magnification, corrected triplet lense, binocular microscope, master color comparison stones, non-contact-optical spectrometer, diamond clarity viewer, and/or other instruments and/or processes as deemed appropriate by I.G.I. This Report includes a detailed description of the diamond and the instruments used in the examination. All instruments and/or processes are deemed appropriate by I.G.I. This Report includes a detailed description of the diamond and the instruments used in the examination. All instruments and/or processes are deemed appropriate by I.G.I. This Report includes a detailed description of the diamond and the instruments used in the examination.
