The laboratory grown diamond described in this Report (Report) has been graded, tested, analyzed, examined and/or inscribed by International Gemological Institute (IGLI). A laboratory grown diamond is one that has essentially the same chemical, physical and optical properties as a mined diamond, with the exception of being grown by man (a manufactured product). Is.B. employs and utilizes those techniques and equipment currently available to IGLI, including, without limitation, 10X magnification, corrected triplet louge, binocular microscope mader color on grown stones, non-contact-optical finglet louge, binocular microscope mader color on grown stones, non-contact-optical injections of the processes as deemed appropriate by IGLI. This Report includes advanced security features. A duly accredited gemologist or jeweler can advise you with respect to the importance of and interrelationship between cut, color, clarity and carat weight.
