PROPORTIONS

Diagram illustrating the proportions of a diamond-shaped facet (likely a gemstone facet) with the following measurements:

 - Top width: 59%
 - Left side height: 14%

The laboratory grown diamond described in this Report (Report) has been graded, tested, analyzed, examined and/or inscribed by International Gemological Institute (IGI). IGI's laboratory grown diamond grading was initially a name chemical, physical and optical properties and was later expanded to include a color grading system (a manufactured product). IGI employs and utilizes those techniques and equipment currently available to IGI, including, without limitation, 10X magnification, corrected 30X magnification, ultraviolet light, infrared light, Raman spectroscopy, a measuring device, Diamond Sure™, Diamond View™, Spectrophotometer and such other instruments and/or processes as deemed appropriate by IGI. This Report includes advised security features. A duly accredited gemologist or jeweler can advise you with relevance the importance of and interrelationship between cut, color, clarity and carat weight.
