The laboratory grow/diamond described in this Report ("Report") has been graded, tested, analyzed, examined and/or inscribed by International Gemological Institute ("IGI"). A laboratory grow diamond is one that has essentially the same chemical, physical and optical properties as a mined diamond, with the exception of having grown by man-made processes. A certified grow diamond is one that has been independently verified by IGI. IGI currently appraises to IGL, including, without limitation, 10X magnification, corrected triplet loupe, binocular microscope, master color comparison stones, non-contact optical properties and density determination. IGI does not appraise or certify the use of instruments and/or processes as deemed appropriate by IGI. This Report includes a disclaimer of any warranty and a disclaimer of any liability for any loss or damage to the insured security features. A duly accredited gemologist or jeweler can advise you with respect to the importance of and interrelationship between cut, color, clarity and carat weight.
