The laboratory grown diamond described in this Report (Report) has been graded, tested, analyzed, examined and/or inscribed by International Gemological Institute (IGI). A laboratory grown diamond is one that has essentially the same chemical, physical and optical properties as a natural diamond. IGI is a company owned and operated by a man (a manufactured product). IGI employs and utilizes those techniques and equipment currently available to IGI, including, without limitation, 10X magnification, corrected microscope, binocular microscope, master tool comparison, non-destructive measuring methods, and/or other methods and/or equipment and/or such other instruments and/or processes as deemed appropriate by IGI. This Report includes advised security features. A duly accredited gemologist or jeweler can advise you with relevance the importance of and interrelationship between cut, color, clarity and carat weight.

The diagram is a diamond shape with a vertical axis on the left and a horizontal axis at the top. The vertical axis is labeled 'Medium' at the top and 'Long' at the bottom. The horizontal axis is labeled 'Long' at the bottom. The diamond is divided into four segments by a horizontal line and a vertical line. The segments are labeled with percentages: 13% at the top, 68.9% on the right, 52% at the bottom, and 13% on the left. The diamond is oriented such that the top and bottom points are on the vertical axis, and the left and right points are on the horizontal axis.

A diagram of a rectangular prism (cuboid) shown from a perspective view. The top face is a rectangle. A red dot is located on the top face, near the back edge. The prism is oriented such that its front and back faces are rectangles, and its side faces are also rectangles. The red dot is positioned on the top face, slightly to the right of the center.

Red symbols indicate internal characteristics.
Green symbols indicate external characteristics.
