The laboratory growdiamond described in this Report (Report) has been graded, tested, analyzed, examined and/or inscribed by International Gemological Institute (I.G.I.). A laboratory grown diamond is one that has essentially the same chemical, physical and optical properties as a mined diamond, with the exception of being grown by man. Many laboratory grown diamonds are available in a wide variety of shapes and sizes. I.G.I. currently available to I.G.I., including, without limitation, 10X magnification, corrected, triple loupe, binocular microscope, master color comparison stones, non-contact optical spectrometer, ultraviolet light, fluorescence spectrometer, and/or other scientific instruments and/or processes as deemed appropriate by I.G.I. This Report includes advanced security features. A duly accredited gemologist or jeweler can advise you with respect to the importance of and interrelationship between cut, color, clarity and carat weight.
